

Lionel (Weiqi) Wang

FULL-STACK & PLATFORM ENGINEER – APPLIED AI

Greater Vancouver, BC | (778) 865-6808 | lionelwwq@gmail.com
lionelwwq.github.io | linkedin.com/in/weiqi-wang-86bb07171

Sole engineer of a ~230,000-line ERP and automation platform that two furniture companies run their daily operations on.

Full-stack engineer who designed, built and operates a ~230,000-line ERP and automation platform – 1,048 REST endpoints, 274 MySQL tables, 150 pages, 20,878 orders – that Amax Leather Canada and Aurora Furniture MFG run their daily operations on. Ships the whole stack: TrueCommerce EDI and QuickBooks integrations, warehouse and compliance document pipelines, a dealer portal serving 30 accounts, and an in-house GPT assistant with 38 function-calling tools staff use daily. MSc Cybersecurity, AWS and Fortinet certified; builds RBAC (124 permission checks) and bilingual EN/ZH delivery in as defaults, not retrofits.

Experience

IT SYSTEMS & INFRASTRUCTURE SPECIALIST

May 2025 – Present

Amax Leather Canada Ltd. & Aurora Furniture MFG | Delta, BC

- Architected and solely built the ERP platform two operating companies run on daily: 77 Node.js/Express route modules, 1,048 unique REST endpoints, 150 pages and 139 front-end JS modules – ~230,000 lines in production.
- Designed the data layer across 4 MySQL databases and 274 tables, fronting the overseas primary with a local read mirror to keep reporting responsive; 20,878 orders flow through the unified order hub.
- Built **AmaxBot**, an in-house GPT assistant: a function-calling chat UI (38 tools) plus a 3,300-line IMAP email bot serving 36 @amaxbot_* staff commands, knowledge-base auto-replies and a daily operations digest.
- Integrated the platform with partners – TrueCommerce EDI over SOAP (retailer POs, acknowledgements, ASNs, invoices) and a QuickBooks hub of 6 connectors and 42 APIs with daily auto-sync and failure alerting.
- Launched a customer-facing dealer portal for 30 dealer accounts: per-dealer catalogs, price lists, branding and photo-upload warranty claims on a tenancy model isolating each dealer's data.
- Enforced RBAC through 124 permission checks, delivered every page bilingually (EN/ZH), and run the servers, deployments, 726 operational scripts and the AWS footprint.

SYSTEM ADMINISTRATOR

Aug 2022 – Apr 2025

Amax Leather Canada Ltd. | Delta, BC

- Ran the server, network and Google Workspace estate and maintained AWS infrastructure (EC2, S3, IAM) for internal applications, reporting and backups.
- Hardened email and DNS with SPF/DKIM/DMARC, ran security audits and phishing defence, and tightened account and access controls across the organisation.
- Automated recurring reporting and data flows with JavaScript dashboards, Google Apps Script and scheduled jobs, retiring manual spreadsheet handoffs.
- Built the first OpenAI-integrated internal tools and maintained the API and EDI links between ERP, warehouse and partner systems – the groundwork the current platform grew from.

WEBSITE DEVELOPER

May 2022 – Mar 2023

Perfect Decor | Burnaby, BC

- Designed and built custom client websites and web applications end to end, from layout through deployment.
- Added features and responsive redesigns to existing client sites, improving usability on mobile.

Selected Projects

AmaxBot – in-house GPT assistant. Chat UI with 38 function-calling tools plus a 3,300-line IMAP bot answering 36 staff email commands and auto-replying from a fulltext knowledge base. *Hard part:* turning free-text email into safe, scoped database reads – tool schemas and permission checks that keep the model inside what the sender is allowed to see.

Dealer Portal + EDI / QuickBooks integration. Public portal for 30 dealer accounts with per-dealer catalogs, pricing and claims, wired to TrueCommerce EDI (SOAP) and a 6-connector, 42-API QuickBooks hub. *Hard part:* reconciling three systems that disagree – idempotent syncs, failure alerting and an audit trail so a rejected ASN or duplicate invoice surfaces instead of silently drifting.

Social Video Maker. Standalone Node app turning a Mandarin script into a finished 9:16 social video – text-to-speech, stock and generated imagery, burned-in subtitles, FFmpeg assembly. *Hard part:* aligning subtitle timing to synthesised speech and keeping the render pipeline entirely on free services.

Skills

Languages	JavaScript (ES2020+), Node.js, Python, SQL, HTML5, CSS3, Bash / PowerShell
Backend	Express, REST API design (1,048 endpoints), service/util layering, node-cron schedulers, IMAP/SMTP, SOAP & EDI, Puppeteer PDF generation, Playwright automation
Frontend	Vanilla-JS SPA architecture, shared design system & component CSS, Bootstrap, bilingual i18n (EN/ZH), PWA / service workers, responsive and accessible UI
Data	MySQL schema design (274 tables), query optimisation, read-mirror replication, Excel/CSV pipelines, operational and financial reporting
Cloud & Infra	AWS (EC2, S3, IAM), Windows & Linux server administration, PM2 process management, deployments, monitoring, Google Workspace
AI	OpenAI GPT function calling (38 tools), NL-to-SQL, retrieval over a fulltext knowledge base, prompt design, OCR document matching, TTS + FFmpeg media pipelines
Security	RBAC (124 permission checks), OTP / 2FA, session & CSRF handling, SPF/DKIM/DMARC, FortiGate administration, security auditing

Education & Certifications

MSc, Cybersecurity

Dec 2024

New York Institute of Technology – network security, cryptography, ethical hacking

Bachelor of Technology, Information Technology (CO-OP)

Jan 2023

Kwantlen Polytechnic University – 3.8 GPA in major | web application development, cloud & website security

Certifications AWS Cloud Foundations · Fortinet FortiGate 7.6 Administrator · Fortinet Google Cloud Security 7.6 Administrator · Fortinet Certified Associate Cybersecurity 1.0 · Fortinet Cybersecurity 2.0
